Flexible Duct Connector

Vibration Dampening Duct Connector

- Commercial applications
- Available in a variety of fabrics
- Pre-assembled with sheet metal permanently secured to fabric
Flexible duct connector that eliminates duct system noises and vibrations for industrial and commercial applications.

**BASIC USE**

Typically inserted between the machinery and the ductwork, PROFlex is an airtight, flexible joint that isolates vibration to the source and reduces noise inside the duct system.

**SPECIAL CHARACTERISTICS**

- Double-lock gripping fingers of metal to fabric adds to holding power.
- Airtight and waterproof at 10” positive w.g. to 10” negative w.g.
- All materials meet or exceed the L.A. standards for Flame Spread (25) and Smoke Density (50).
- Ductmate PROFlex fabrics are designed to meet NFPA 90A and 90B.

Standard 100 ft. per carton.

Metal is available in galvanized, stainless and aluminum.

All fabrics are available without metal attached in various widths x 100 ft. per roll.

For chemical resistance information, consult your nearest Ductmate distributor or call Ductmate direct.

**LIMITED PRODUCT WARRANTY**

Ductmate warrants that PROFlex, when properly installed and maintained, will be free from defects in material and workmanship, and will comply with all written specifications made by Ductmate at the time of sale. Ductmate’s warranty shall run for a period of one year from the date of manufacture.

**Warranty Limitation**

The warranty stated above is in lieu of all other warranties, express or implied, including but not limited to the implied warranties of MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Although Ductmate may have suggested the product, or provided written or oral advice to the Purchaser, it is the Purchaser’s responsibility to test and determine the suitability of PROFlex, or the intended use and purpose, and Purchaser and/or its customer assumes all risk and liability whatsoever regarding such suitability.

**Limitation of Liability**

In the event of a breach of the above warranty, Ductmate’s sole obligation, and Purchaser’s sole and exclusive remedy, shall be, at Ductmate’s option, repair or replacement of any defective products, or refund of an applicable portion of the purchase price. Ductmate shall have no liability for costs of removal or reinstallation of the product. The Purchaser agrees that no other remedy, including but not limited to loss of profits, loss sales, injury to person or property, or any other special, incidental or consequential damages, shall be available to the Purchaser for any claim arising out of this Agreement, regardless of whether such claim is made in contract or in tort, including strict liability in tort.

In no event will Ductmate be obligated to pay damages to the Purchaser in any amount exceeding the purchase price that the Purchaser paid to Ductmate for the allegedly defective product.
To seam flexible connector at corner of connector:

1. Cut through center of lock as indicated. Cut 1” to 1½” deep to allow sufficient lap.

2. Option A:
   - Pull fabric free of lock. Snip severed lock as indicated. Ends of metal are now ready for bending and joining.

2. Option B:
   - From edge of connector, cut away metal as indicated. Metal falls away exposing fabric ready for seaming.

3. Put a liberal amount of sealant between the two fabric flaps and press the two pieces together to allow the sealant to spread out. Roll the flap ends together and staple the seal 1” O.C. (going through both pieces of fabric and the sealant). Allow a minimum of 24 hours curing time before flexing the connection.

To stiffen a flexible connector:
(Recommended for Commercial applications)

1. Lay out the connector as you normally do.

2. Bend seam up to 90° on brake as indicated in drawing.

3. Using heavy snips, notch standing seam at bend points.

4. Bend to form completed connector.
