

Speed That Drives Your Business

Introducing The New

CORNERMATIC® STRAP-PAK™

Corner System

**Compatible With All
Cornermatic**

**Corner Inserting
Machines**

Simply Load & Watch

The Savings Stack Up!

- The Fastest, most efficient way of reloading TDC/TDF Corner-inserting machinery in the HVAC industry.
- Cornermatic Strap-Pak Corners reload at least three times faster than traditional corner packaging reducing both loading time and lost “production time” – your loading costs are actually double your loading time.
- Average saving of \$10.25 for Dual-Head machines and \$5.12 for single head machines depending on labor availability, hourly rates and size of duct.

Strap-Paks contain 80 corners per strap verses the traditional 25 per stack.

- The New Strap-Pak design “Sandwiches” all 80 corners together like a clamp keeping them properly aligned to reduce corner loading jams and the strapped magazine design makes loading easier. No need to guess which way to load.
- Strap-Paks are available for both TDC (CMCGASTPK) & TDF (CMFGASTPK) flange Systems.
- Also available the New Patent Pending “Universal” Corner System. This revolutionary corner design is ideal for hard fitting transitions, heavy gauge duct and fits both TDC & TDF flange systems with one corner.

The New Strap-Pak Corner Chute

Visit www.ductmate.com/strap-pak to watch a brief informative demonstration and watch how you can save money.

Mestek Machinery approved Cornermatic Strap-Pak Chutes are available – free of charge – to fit all corner inserter models and each kit takes only minutes to install.

CPLUSSHIM

Fits all “Cornermatic Plus” Models

DHCONKIT

Fits all Standard Dual Head Models

SHCONKIT

Fits all Standard Single Head Models

High quality American Made steel is precision stamped and proudly manufactured in the U.S.A by
